

## SEVERAL NEW PROJECTS

Once again, we are delighted to share some recent Marinetek Group success stories with you. Together with our international partners, we have signed several extensive contracts all over Europe further strengthening our global presence in the marina business. In addition to being very busy in Croatia, Scandinavia and the Baltic countries, we are hard at work on the following highlight projects.

**Carrickfergus Marina** near Belfast in Northern Ireland. Marinetek UK will fully rebuild the existing marina as part of a contract that includes dismantling the old pontoons and building a completely new marina of over 350 berths with new visitor pontoons. The marina will feature Marinetek Conduct steel frame and concrete deck pontoons, which will be manufactured in the UK and finger pontoons constructed by Marinetek Latvia. The next generation Spinnaker dockside services will be delivered by Rolec. Carrickfergus is all set to be a prestigious landmark facility and will be ready in August 2008.

The biggest and most modern **marina in the Black Sea** region is, meanwhile, under construction in Constanta, Romania. This massive EU-project began last summer and will be complete in September 2008. The design comprises Marinetek Heavy Duty Pontoons with fingers up to 12m long and 15m long Super Yacht Fingers for the biggest boats. Services are again from Rolec. All pontoons and equipment have already been manufactured and delivered from Finland and Latvia. Our local partner, Black Sea Magic, has worked supremely well and opened up a big market for us in the Black Sea.

With our highly experienced Danish partner, CC-Design, Marinetek has also signed the biggest marina supply agreement in Denmark. **The Svanemøllehavnen** in the heart of Copenhagen City will be fully rebuilt in four phases. When complete, the marina will be the biggest in Denmark with 1200 berths and will be constructed using Marinetek Heavy Duty Pontoons and Fingers. All pontoons will be produced in Finland and the fingers in Latvia. The first phase of this luxurious flagship marina will be finalised in April 2008.

Our **first big marina contract in Turkey** has been secured for Gocek near Fethiye on the gorgeous south coast. The first phase includes a Marinetek 4300-series Breakwater, 4300-series Heavy Duty Pontoon and Marinetek 12m fingers. The massive floats are now under construction in the Marinetek NCP factory in Croatia and the fingers will be produced in Latvia. The entire project and all construction work will be undertaken in close co-operation with our local partner Das Oto De je Ven. The first phase of this very demanding project is scheduled for completion in early May 2008.
